EDUCATION

Virginia Tech Blacksburg, VA
Master of Engineering in Computer Science and Applications Expected May 2027

Virginia Tech Blacksburg, VA
Bachelor of Engineering in Computer Science May 2026

EXPERIENCE

DevOps Engineer Intern May 2026 – Aug 2026
Kinsale Insurance Richmond, VA

- Built OpsKiosk, a centralized software inventory platform that automatically ingests metadata (ownership, dependencies, pipeline health, activity) from 120+ GitLab projects, replacing manual repository-by-repository lookups.
- Eliminated hours of manual searching across repositories, letting engineers answer service ownership and maintenance questions in under 30 seconds through a single query.
- Adopted by 50+ engineers and managers as the single source of truth for software inventory, recovering an estimated \$30K+ per year in engineering time and reducing the manual effort behind audit and compliance reporting.

Teaching Assistant, Computer Systems Aug 2026 – Present
Virginia Tech, Department of Computer Science Blacksburg, VA

- Support 150+ students across weekly office hours and lab sessions in C systems programming, concurrency, virtual memory, and network protocols.
- Grade and give feedback on large-scale systems projects (shell, threading, HTTP server), holding a consistent turnaround of under one week per assignment.

Undergraduate Researcher Aug 2025 – May 2026
Virginia Tech, Dr. Luke Achenie's Lab Blacksburg, VA

- Developed a blind symbolic regression framework using Large Language Models to recover physical equations (Arrhenius, Antoine) directly from experimental data with no prior knowledge of the equation form.
- Deployed and benchmarked discovery pipelines on VT ARC supercomputing clusters with local vLLM servers and hybrid BFGS/differential evolution optimization, cutting time-to-result per experiment by roughly 60% versus serial baselines.

PROJECTS

CrateTests (SaaS) | *Next.js, Firebase, OpenAI API, Stripe*

- Launched an EdTech platform using a fine-tuned GPT-4o-mini to turn user documents into study materials, generating a full practice set in under 60 seconds versus hours by hand.
- Shipped Stripe payment processing end to end and converted the product to a paying subscriber base at cratetests.com.

2D Isometric Game Engine | *Java, Swing, AWT*

- Architected a custom isometric rendering engine with optimized tile-based z-ordering, sustaining 60 FPS with 500+ active entities on screen.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, Swift, JavaScript, SQL, Rust, Go, GDScript

Tools: PyTorch, ONNX, Flask, React, Next.js, Firebase, AWS, GitLab CI/CD, Docker, Git, Linux, HPC/ARC
